Cryogenic and Laboratory

More than one million human tissue samples are collected every year – all needing storage and transportation at temperatures down to -196°C .

Label durability is essential under such challenging conditions, so life-saving (and life-creating) samples remain intact and clearly identified.

Avery Dennison offers a complete range of clear and white labelling materials for test tubes and laboratory applications in hospitals, clinics and research laboratories. They can be used to identify medical bottles, test-tubes and vials, which often have challenging surfaces and/or small diameters, and can be exposed to chemicals and temperature changes.

Key features

- Extreme low cryogenic temperatures: -196°C
- Steam autoclave sterilisation (up to $+121^{\circ}\text{C}$)
- Good chemical resistance
- UV flexo, thermal transfer, direct thermal and UV inkjet
- White, opaque and clear versions

Application areas

- Hospital, clinic and laboratory labelling
- Deep freeze applications
- Small diameter containers
- Re-labelling with opaque labels
